Cherry pick

For this tutorial step, we have prepared a repository with some ready made commits to speed things up.

You can download the repository [here](#).

Go to the downloaded "stepup-tutorial/tutorial4" directory and examine the history of this repository. It should look like the following.

In this step, we are going to create a new commit in the master branch that is a copy of the commit with the message "append description of the commit command" residing on a different branch within the same repository.

Git Tutorial

The commit hash "99daed2" may differ on your local repository. You can obtain the commit hash by running "git log" in that branch. Find out the commit hash on your local repository and use that instead.

```
$ git checkout master Switched to branch 'master' $  
git cherry-pick 99daed2 error: could not apply  
99daed2... commit hint: after resolving the  
conflicts, mark the corrected paths hint: with 'git  
add <paths>' or 'git rm <paths>' hint: and commit  
the result with 'git commit'
```

As you can see here, a conflict has occurred. Manually resolve it and proceed with committing the change.

```
$ git add sample.txt $ git commit
```
