

## Git Tutorial

A teal banner with a white Git logo and the text 'backlog by nulab + git'. Below this, it says 'Backlog lets you manage projects with Git integration'. On the right, there is a 'Learn more' link with a right-pointing arrow icon. The background features a faint, light-colored diagram of a network or branching structure.

**backlog** by nulab + **git**

Backlog lets you manage projects with Git integration

## Remote branches

Although Git is local on your computer, you can also have remote copies of a repository. Remote repositories can be on a private central server or even simply on a coworker's computer.

You can also have a remote repository hosted using an online service—such as Backlog.

You can retrieve others' changes to the repository or move your local copy of a repository to the remote server.
