

Git Tutorial

A teal banner with a white Git logo and the text 'backlog by nulab + git'. Below this, it says 'Backlog lets you manage projects with Git integration'. On the right, there is a 'Learn more' link with a right-pointing arrow icon. The background features a faint, light-colored diagram of a network or project structure with circles and lines.

Clone a remote repository

Select your PC environment:

Windows

Mac

Command Line

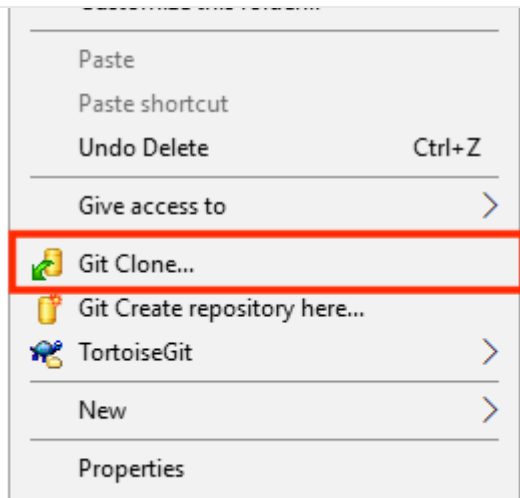

Make a copy of a remote repository so that you can start work on it on your local machine.

Now, let's assume the role of another member in the team and clone the existing remote repository onto another directory named "tutorial 2".

Windows

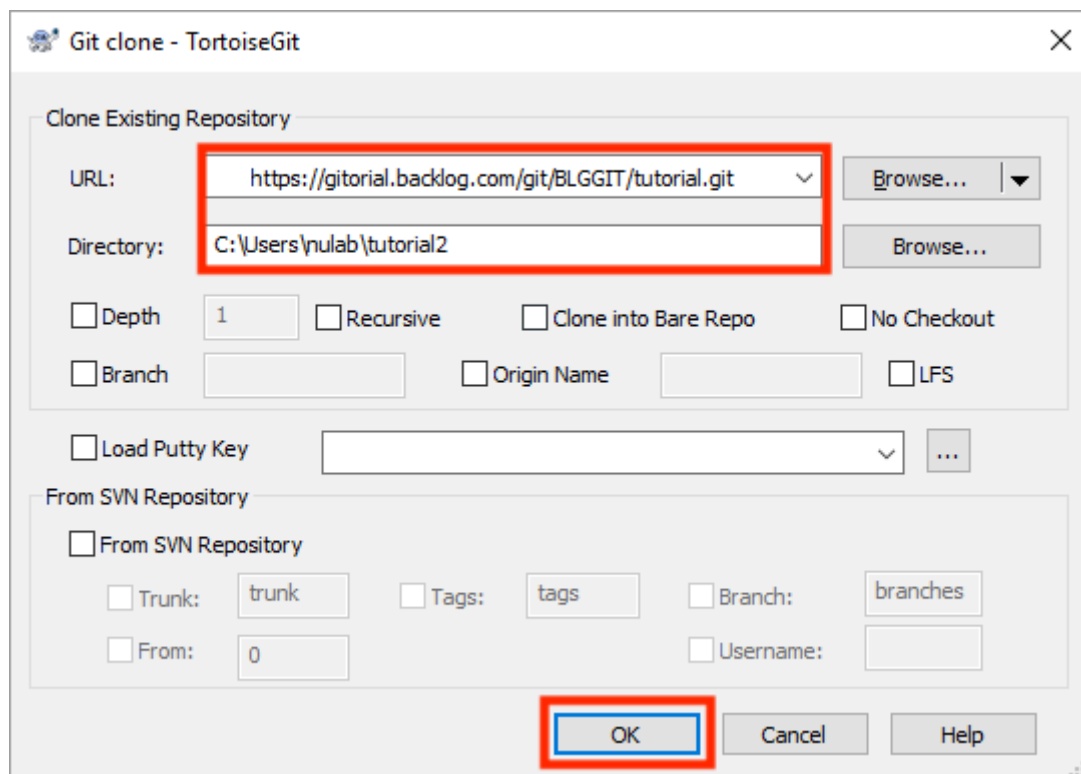

Double-click anywhere on the desktop and click "Git Clone" in the right-click menu.

Git Tutorial

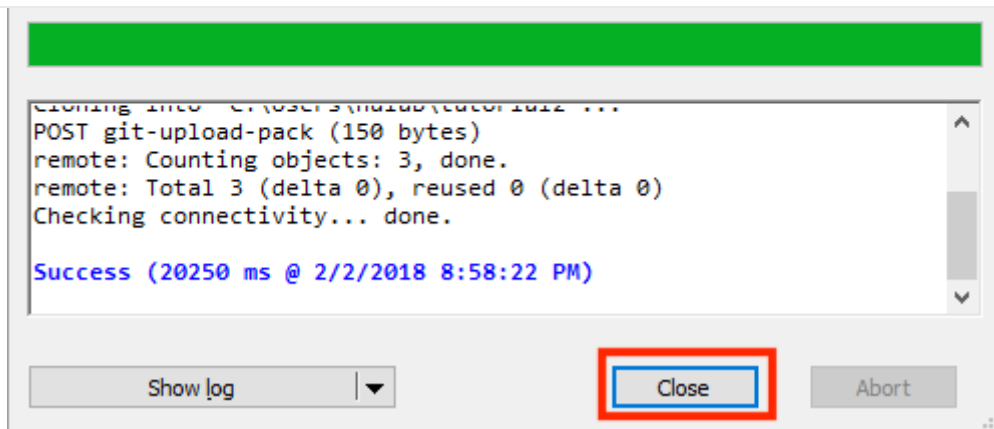

Enter the remote repository URL that we want to clone and the name of the directory to be saved. Click "OK".

In this example, we are cloning the remote repository that was created in the previous page but with a different directory name ("tutorial 2").

Cloning will begin in the next screen. When that is completed, click "Close" to finish.

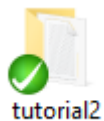

Git Tutorial

A screenshot of a Windows-style dialog box with a green title bar. The main area contains a text box with the following text: "Cloning into 'C:\Users\mduib\tutorial2 ...'", "POST git-upload-pack (150 bytes)", "remote: Counting objects: 3, done.", "remote: Total 3 (delta 0), reused 0 (delta 0)", "Checking connectivity... done.", and "Success (20250 ms @ 2/2/2018 8:58:22 PM)". At the bottom, there are three buttons: "Show log" with a dropdown arrow, "Close" (which is highlighted with a red rectangle), and "Abort".

```
Cloning into 'C:\Users\mduib\tutorial2 ...'
POST git-upload-pack (150 bytes)
remote: Counting objects: 3, done.
remote: Total 3 (delta 0), reused 0 (delta 0)
Checking connectivity... done.

Success (20250 ms @ 2/2/2018 8:58:22 PM)
```

The directory "tutorial 2" has now been created.

To verify that the cloning has been executed successfully, check that the

Backlog has built-in Git repositories for every project
