
Git Tutorial

Default settings

Select your PC environment:

Windows

Mac

Command Line

Now, let's set up the default username and e-mail address for Git that will be used to identify the person who commits the change. This setup only needs to be done once.

Windows

From the right-click menu, click TortoiseGit > Settings.

Git Tutorial

In the following combobox you can find all installed language packs which can be used by this version of TortoiseGit.

If you want to use a translated version of TortoiseGit and your language is missing, [download](#) and install a matching language pack now and hit "Refresh" before continuing.

Language: Refresh

Download language packs:
<https://tortoisegit.org/download/>

< Back **Next >** Cancel Help

On the settings screen, enter your name and e-mail address.

First Start Wizard - TortoiseGit

Configure user information

Git requires that you set up a user name and email address. Both are used as meta data for your commits (not for authentication).

Name:

Email:

These settings will be stored to your global git configuration (%HOME%/.gitconfig) and will be used for all your git repositories as a default.

☐ Don't store these settings now.

Backlog has built-in Git repositories for every project
