

Git Tutorial

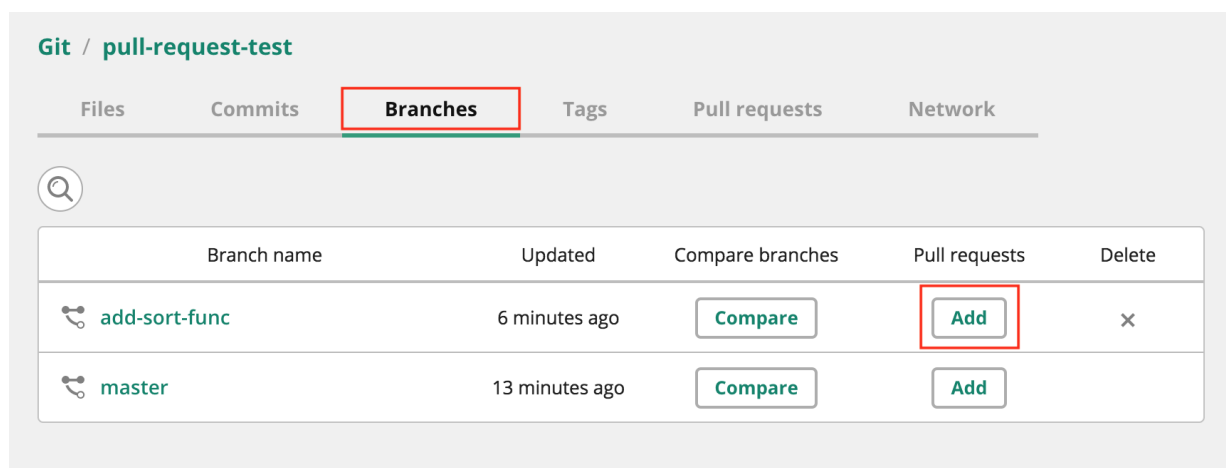

Create a pull request

Select the target repository from the Git repository list, and open a branch list.

There is the "add-sort-func" branch created earlier. Click "Add" in the pull request column.

The following screen will be displayed.

Git Tutorial

Added sorting function

Description

I added a function for sorting.
Please review.

Fix JSON

Select issue

Drag & Drop Files

OR

Select File(s)...

Hold down Shift key for multiple selection.

Notify pull request to:

Add pull request

1. Target branch: Target branch to merge a pull request
2. Pull request branch: Branch to be merged
3. Pull request contact: Person in charge of review and merge of the pull request created

Once you have entered the info, click the "Add pull request" button to create a pull request. When you create the pull request, notifications are sent to the pull request contact and the users you want to notify. The following screen will be displayed next for you to check the request.
