

## Git Tutorial

## Create a remote repository

Let's start off by creating a remote repository on Backlog.

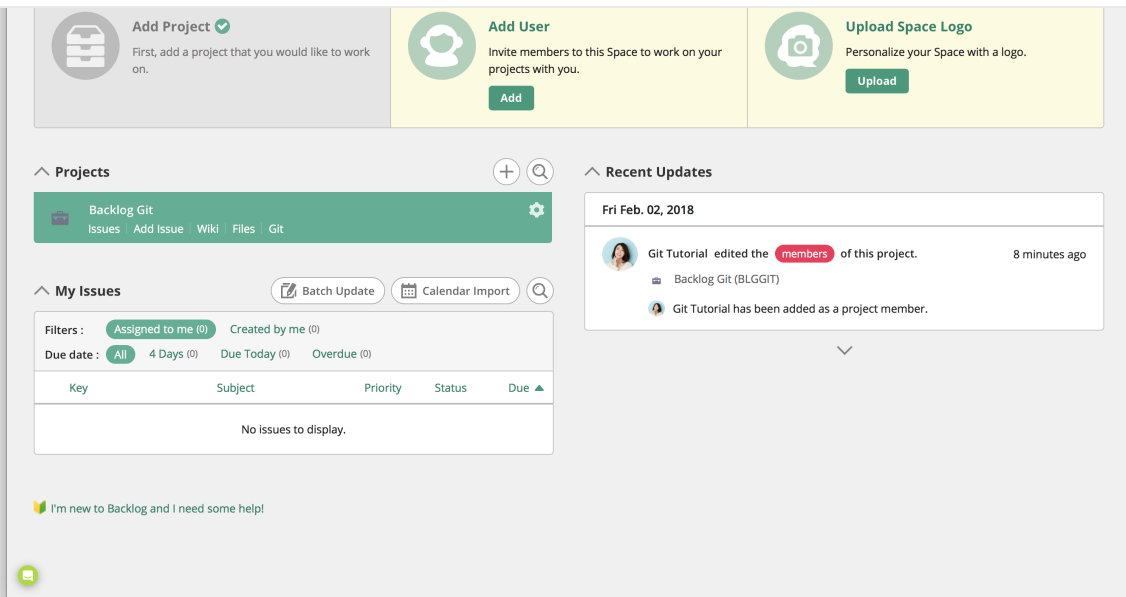

### TIP

On Backlog, only users with administrative privilege will be allowed to create new Git repositories. If you do not have administrative privilege, you will have to contact the administrator of your Space to have a new repository created. Alternatively, you can start your own Space and create a repository there. Backlog offers a free trial plan for you to get started!

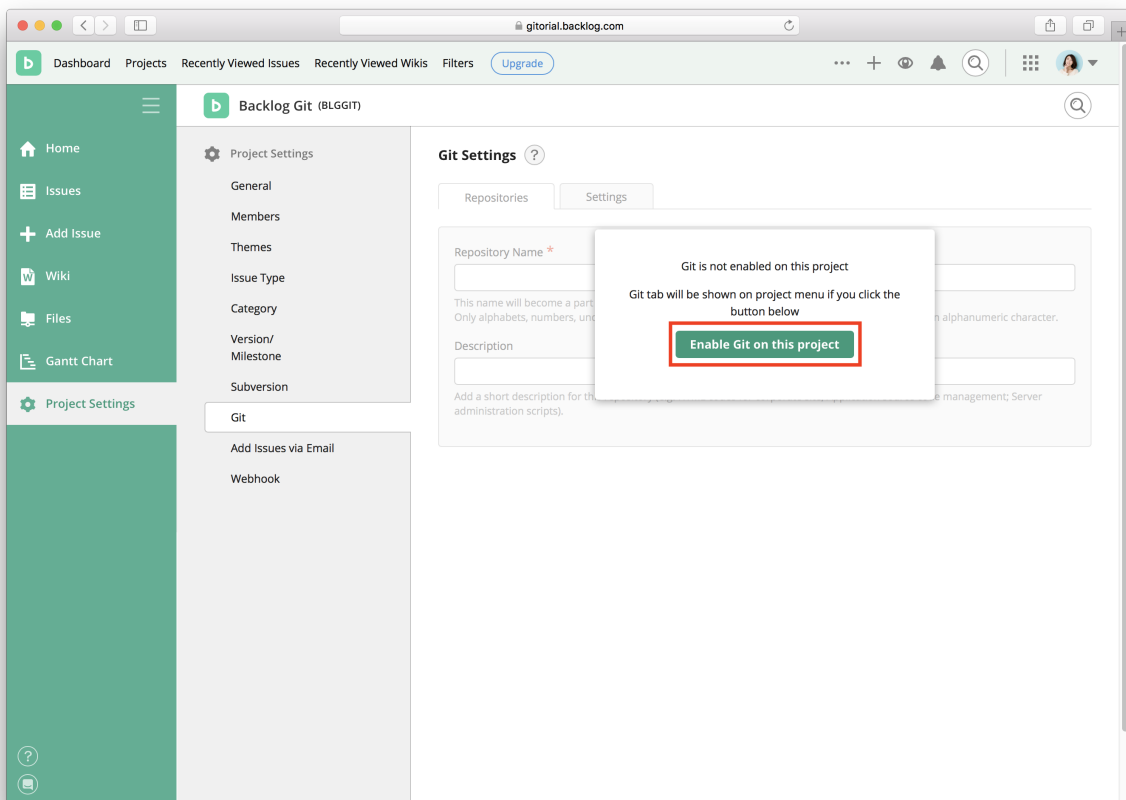

### Start a new space here!

First, log in to Backlog and click "Git" from the menu of the project in which you want to create a repository. If you do not have a project yet, you may want to create one first.

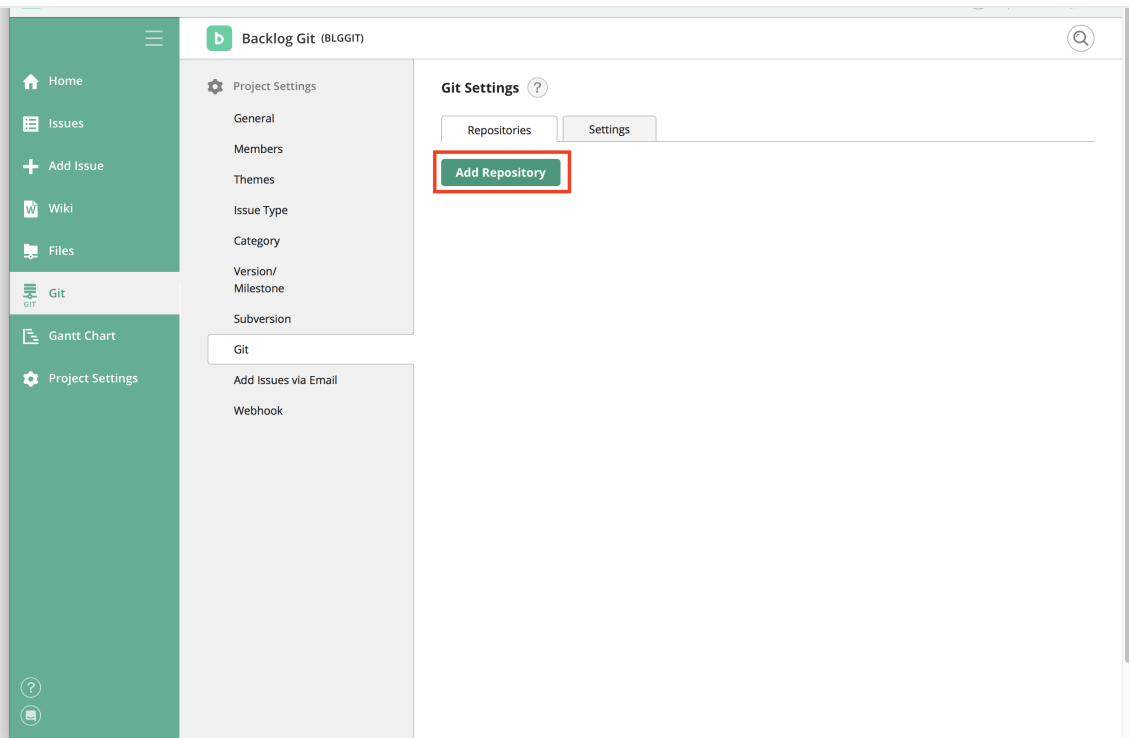

## Git Tutorial

If Git is not displayed as shown above, you will have to activate it by selecting the project and then go to "Project Settings" > "Git Settings".

## Git Tutorial

Enter the a name and description, then click the “Create Repository” button. For this tutorial, enter “tutorial” as the name and “For use in tutorial” as the description.

## Git Tutorial

repository name 

tutorial

This name will become a part of the Git repository URL.  
Only alphabets, numbers, underscores, hyphens and periods are allowed; name needs to start with an alphanumeric character.

- HTTP `https://gitorial.backlog.com/git/BLGGIT/tutorial.git`
- SSH `gitorial@gitorial.git.backlog.com:/BLGGIT/tutorial.git`

Description

For use in the tutorial

Add a short description for this repository (e.g. HTML codes for corporate site; Application source code management; Server administration scripts).

WebHook URL

When pushing to this repository, notifications of the push along with POST request will be sent to this URL (e.g. `http://yourserver.com/update_repository`). [More information](#).

We can see that a new repository has been added as shown below.
