Delete branches

Now that "issue1" has been successfully merged with "master", we can delete it.

We can delete a branch by calling the branch command and passing in the -d option, followed by the branch name.

```
$ git branch -d
```

Run the following command to delete "issue1".

```
$ git branch -d issue1  
Deleted branch issue1 (was b2b23c4) .
```

We can verify that "issue1" has been deleted by calling "git branch". Only the master branch should be listed.

```
$ git branch  
* master
```
