Create a repository

Select your PC environment:
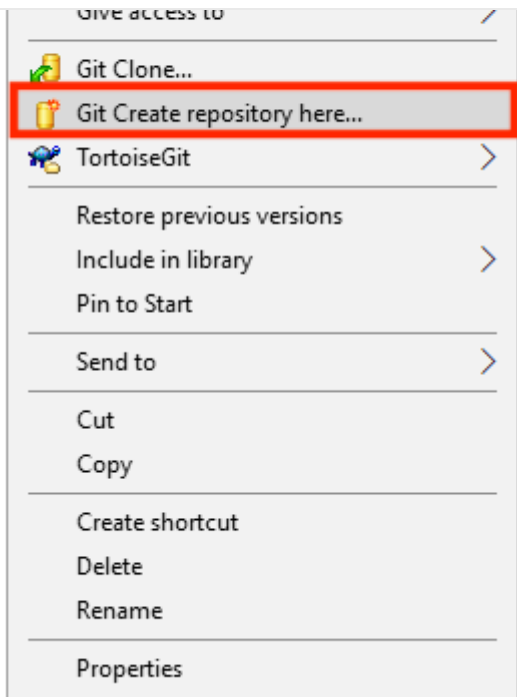

Windows	Mac	Command Line

Let's start off by creating a new local repository. Our goal is to create a new tutorial directory and put it under the Git version control. We will be using this directory throughout this tutorial.
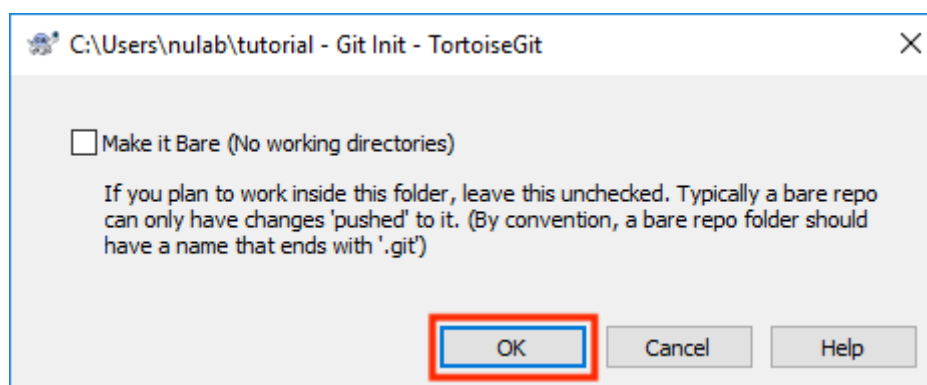

Windows

Create the tutorial directory anywhere on your computer. Right-click and then click "Git Create repository here" to have that directory tracked by Git.
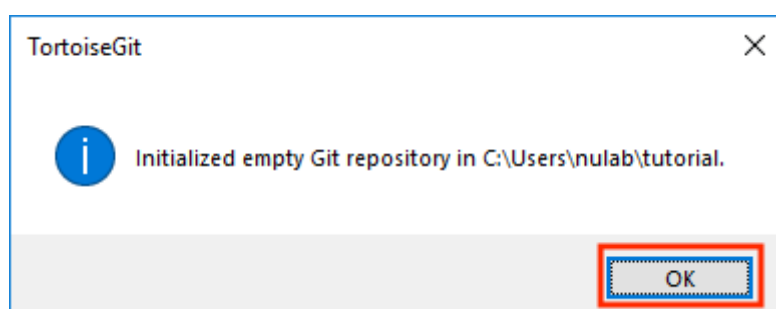

Git Tutorial

In the following screen, click "OK" without checking "Make it Bare".

Upon successfully creating a repository, click "OK" and close it in the next prompt.
